

Juan Pablo García Chávez | Data Analyst | Business Intelligence & Data Analytics

Mexico, Morelia

juanpablogarciachavez7799@gmail.com | (+52) 44-34-48-75-07

[Linkedin](#) | github.com/JuanPa7799 | [Portafolio](#)

Strategic Data Analyst focused on driving organizational growth by optimizing processes and defining critical KPIs. With a solid technical background in engineering, I use SQL, Python, and Data Storytelling to transform complex data into clear, actionable recommendations that guide executive decision-making and generate real business value.

Technical Skills

Data Analysis

Python | SQL | Pandas | NumPy | Matplotlib | Seaborn | Jupyter Notebook

Data Science and Analytics

Statistical Analysis | Data Preprocessing | Exploratory Data Analysis (EDA)

Visualization and Business

Dashboarding | Data Visualization | KPI Analysis | Data Storytelling | Business Analytics

Tools

Git/GitHub | Docker | Linux | Excel | Jupyter Notebook

Languages

Native Spanish | Intermediate English (B1 – TOEFL Certified)

Analysis & BI Projects

[Oil Risk and Profitability](#) | [Decision analytics](#) | TripleTen – 2025

- Developed a model for selecting a drilling region considering expected profit and risk of loss.
- As a result, region_1 was recommended due to its estimated average profit of 4.52M USD and a loss risk of 1.5%.
- Translated statistical uncertainty into an executive recommendation to support an investment decision.

Technologies: Python, pandas, NumPy, scikit-learn, linear regression, and bootstrap.

[Churn Prediction for Interconnect](#) | [Customer Retention](#) | TripleTen – 2025

- Developed a predictive model to identify customers with a high probability of churn in a telecommunications company, analyzing behavior patterns, contract types, and services.
- Performed multi-source data processing and cleaning, applying feature engineering techniques to optimize model accuracy and extract actionable insights for the marketing team.
- Translated technical results into strategic recommendations through Data Storytelling, proposing retention plans based on identified customer segments.

Technologies: Python (Pandas, Scikit-learn), SQL, Machine Learning, Data Analysis.

[Used Car Pricing](#) | [Pricing analytics](#) | TripleTen – 2025

- Developed a price estimation model for the used car market, optimizing the balance between predictive accuracy and operational efficiency.
- Evaluated Machine Learning algorithms (LightGBM and Random Forest), documenting a key trade-off between training speed and model accuracy (RMSE).
- Translated technical findings into product recommendations: selected LightGBM for its high operational efficiency while maintaining competitive error metrics against slower models.

Technologies: Python, Pandas, Scikit-learn, LightGBM, Random Forest.

Professional Experience

Data & Research Analyst

Instituto Tecnológico de Morelia – Research Laboratory | January 2024 – Present

- Transformed complex electrical signal datasets into dashboards and technical reports, facilitating strategic decision-making in research projects.
- Performed exploratory data analysis (EDA) and statistical validation, identifying key patterns that optimized predictive accuracy by over 96%.
- Designed and maintained data cleaning, transformation, and preprocessing pipelines in Python, reducing processing times by 80%.
- Collaborated with multidisciplinary teams to translate technical findings into clear and actionable business recommendations.

Data & Processing Engineer

Instituto Tecnológico de Morelia – Research Laboratory | August 2022 – January 2024

- Optimized data workflows (ETL) in Python and SQL, automating high-frequency signal capture and analysis.
- Implemented feature engineering and data cleaning techniques, improving dataset quality and reducing processing latency by 40%.
- Developed analytical solutions and automated monitoring tools for energy data visualization, improving project traceability.

Programming & Analytics Instructor

Instituto Tecnológico de Morelia | August 2022 – Present

- Designed curricula focused on Python applied to data science and analytical thinking, teaching over 100 students per semester.
- Developed educational materials centered on Data Storytelling, effective communication of results, and technical problem-solving, facilitating the adoption of analytical tools.

Data Lead | Aerospace Project

Space Karani, Mexico | January 2024 – Present

- Led experimental data validation and performance metric analysis in critical testing, ensuring the accuracy of aerospace performance models.
- Coordinated analytical support for strategic decision-making, translating technical results into impact reports for a multidisciplinary team of 30+ people.

Education

Master of Science in Electronic Engineering | Instituto Tecnológico de Morelia (2024 – 2026)

Specialization: AI, Machine Learning, Statistical Analysis.

Mechatronics Engineering | Instituto Tecnológico de Morelia (2018 – 2024)

Data Science Certification | TripleTen (Expected completion: 2026)

Continuous Education

Training in: Python, SQL, Machine Learning, Data Visualization (Platzi, 2021-Present).
