Profile

Junior Data Analyst with a background in Mechatronics Engineering and a Master's degree in Electronic Engineering. I work with Python, SQL, exploratory analysis, KPIs, and visualization to turn data into clear recommendations. My differentiator is combining engineering judgment with business-oriented communication.

Skills

- Data analysis: Python, pandas, NumPy, SQL, Excel.
- Visualization and communication: KPIs, dashboards, data storytelling.
- Applied modeling: classification, regression, forecasting, and business metrics.
- Data quality: cleaning, integration, validation, and documentation.

Selected Projects

Oil risk and profitability

Recommended `region_1` by combining expected profit and loss risk. Used linear regression and bootstrapping to support an investment decision under uncertainty.

- Estimated average profit: 4.52M USD.
- Loss risk: 1.5%, below the business threshold.
- Focus: decision analytics, uncertainty, and executive communication.

Interconnect churn prediction

Integrated contract, customer, internet, and phone data to estimate cancellation risk and support retention strategy.

- 7043 customers integrated.
- Final model: Gradient Boosting.
- Test ROC-AUC: 0.8963; test accuracy: 0.8538.

Used car pricing

Compared models to estimate car prices while considering predictive quality and response speed.

- LightGBM RMSE: 1776.60 with fast training.
- Random Forest RMSE: 1747.77, but with very high training cost.
- Focus: trade-off between accuracy, time, and product use.

Mobile plan recommendation

Classified users into Smart or Ultra plans based on monthly behavior.

- Final model: Random Forest.
- Test accuracy: 0.8149.
- Sanity baseline: 0.6967.

Education

- Master's degree in Electronic Engineering.
- Mechatronics Engineering.
- Applied training in Data Science and Machine Learning.
